Perspectives in Affective Disorders

Editor:

Wolfgang P. Kaschka

In this publication a comprehensive overview of the state of the art and future perspectives is given in the fields of basic research, diagnosis, therapy, suicide and relapse prevention, and psychiatric care regarding patients with affective disorders.

Presented are decisive new developments which have been milestones in basic research or diagnosis, pharmacotherapy and psychotherapy of affective disorders. The contributions of renowned experts in the field include quantitative brain morphology and developments in genetics and neurochemistry. Special attention has been given to neuropharmacology, pharmacogenetics, electrophysiology, structural and functional neuroimaging of affective disorders as well as new therapeutic options in the field of psychotherapy.

Moreover, important clinical issues such as modern aspects of preventing relapse, suicide and postnatal depression in mothers are discussed.

Psychiatrists, psychotherapists, neurobiologists and students who participate in the treatment of patients with affective diseases will find this book valuable reading.

Biological psychiatry contributes a new and exciting dimension to the knowledge of abnormal human behavior. By focussing on the biological determinants of behavior and psychopathology, the volumes in the series provide clinicians and researchers with timely updates on the most significant work conducted in selected areas internationally. Most significant progress comes from interdisciplinary collaboration, so that methodological contributions from the biological and psychological sciences are juxtaposed with clinical more practical updates.
