Bridging Basic and Clinical Perspectives

Autonomic Nervous System in Old Age

Editors:
George A. Kuchel
Patrick R. Hof

With the remarkable increase in life expectancy in recent years, overall numbers of older individuals living with disability and functional dependence are likely to increase.

Age-related changes and diseases involving the peripheral nervous system, particularly its autonomic elements, frequently play determining roles in late life health and functional independence. While basal sympathetic activity increases with normative aging, there is evidence of considerable dysregulation of the ability of the aging sympathetic nervous system to respond to a variety of challenges.

In this book, investigators from several different disciplines discuss aging of the autonomic nervous system from a variety of perspectives. Given the fact that aging of the parasympathetic elements of the autonomic nervous system is not nearly as well understood as that of its sympathetic portions, greater emphasis has been placed on the latter.

The topics of this volume provide an excellent overview addressing a number of clinically important questions by highlighting key clinical and basic research studies. This book should be of great interest for general physicians, specialists in geriatrics, and neurologists.

KARGER

A comprehensive and integrated approach to the problems of aging

Interdisciplinary Topics in Gerontology

Editors:
Patrick R. Hof
Charles V. Mobbs

At a time when interest in the process of aging is driving more and more research, 'Interdisciplinary Topics in Gerontology' offers investigators a way to stay at the forefront of developments. This series represents a comprehensive and integrated approach to the problems of aging and presents pertinent data from studies in animal and human gerontology. In order to provide a forum for a unified concept of gerontology, both the biological foundations and the clinical and sociological consequences of aging in humans are presented. Individual volumes are characterized by a synthetic view of the aging process, novel ideas, and original approaches to healthy aging as well as age-related functional decline.
