# Frontiers in Celiac Disease

Editors

**Alessio Fasano**  
**Riccardo Troncone**  
**David Branski**

Few other fields in human biology have experienced such a tremendous progress as celiac disease has during the past few years. The contributors to *Frontiers in Celiac Disease* are world-renowned opinion leaders who made these advances possible. Their expertise has been assembled here to provide a comprehensive overview of the current knowledge of the epidemiology, pathogenesis, clinical presentations, diagnosis and treatment of celiac disease. In addition, the stage is set for innovative strategies for preventive interventions and treatment alternatives to a gluten-free diet.

A valuable reference for basic and translational scientists, this book also serves as a practical resource to healthcare professionals, including general practitioners, subspecialists, dieticians, nutritionists, and nurses and nurse practitioners. Students from different disciplines will find this book a helpful guide to expand and deepen their knowledge of celiac disease.

## The Book Series

A problem-oriented series aimed at both the general practitioner and the hospital physician

# Pediatric and Adolescent Medicine

Series Editors: Branski, D. (Jerusalem); Kiess, W. (Leipzig)  
ISSN 1017-5989

This series deals with rapidly evolving pediatric subspecialties such as perinatal medicine, pediatric endocrinology, immunology, neurology and cardiology. The individual volumes not only highlight recent advances in a particular area, but also provide a comprehensive overview of new trends in monitoring child development and subsequent adult health. The series aims to inform both the general practitioner and the hospital physician about current theoretical and practical developments in pediatric and adolescent medicine.
