Ten years ago a group of experts assembled in Chicago to develop a consensus on the management of conditions previously described as intersex. The consequences of this consensus have been far reaching, including a change in nomenclature, the development of greater collaboration across geographical boundaries, and a move towards greater involvement of patients and parents. Moreover, an international registry was established, as well as research and clinical networking.

This book brings together a thorough overview on various aspects of disorders of sex development (DSD), this book will be essential reading to all clinicians who are involved in delivering health care to patients with a DSD, as well as scientists involved in biomedical research related to DSD.

Contents

Foreword: Hiort, O.; Ahmed, S.F.
Preface: Hughes, I.; Lee, P.

Concepts
- Gonadal Development: Lucas-Herald, A.K.; Bashamboo, A.
- The Masculinization Programming Window: Welsh, M.; Suzuki, H.; Yamada, G.
- Androgen Action: Werner, R.; Holterhus, P.-M.

Technological Advances
- Steroid Biochemistry: Kamrath, C.; Wudy, S.A.; Krone, N.
- Next Generation Sequencing for Disorders of Sex Development: Tobias, E.S.; McElreavey, K.
- Advances in Neuroimaging: Rodie, M.E.; Forbes, K.P.; Muir, K.
- Imaging Endoscopy and Diagnostic Surgery: Wünsch, L.; Buchholz, M.
- Fertility Issues in the Management of Patients with Disorders of Sex Development: Guercio, G.; Rey, R.A.

Communication
- Improving the Communication of Healthcare Professionals with Affected Children and Adolescents: Nordenström, A.; Thyen, U.
- Working with Adolescents and Young Adults to Support Transition: Gleeson, H.; Wisniewski, A.B.

The easiest way to order: www.karger.com/endev

Orders may be placed with any bookshop, subscription agency, directly with the publisher or through a Karger distributor.
Scope and Vision
The scope of Fetal Diagnosis and Therapy is fetal medicine in its broadest sense, including basic science and pathophysiological issues, prenatal diagnosis, clinical management and fetal therapy. The journal's main goal is to provide useful information and new insights into fetal diagnosis and therapy in the form of original research, reviews and relevant clinical cases and images. Our vision is to become a journal of reference for the multidisciplinary audience of professionals involved in clinical practice and research in fetal medicine.

Authors should ensure that their work complies with all regulations laid down by their state or community and should have obtained the necessary informed consent. Neither the editors nor the publishers will accept any responsibility in the case of neglect or avoidance of these rules.

Submission
Manuscripts written in English should be submitted online along with the names, postal and e-mail addresses of at least four experts in the appropriate area of research. Selected scientists(s) will be invited to act as referees(s). Referees suggested should not be from the same institution as the author and should have expert knowledge of the subject.

www.karger.com/fdt
Should you have any problems with your submission, please contact:
Prof. Dr. Eduard Gratacós
S. Karger AG
Editorial Office 'Fetal Diagnosis and Therapy'
PO Box
CH–4009 Basel (Switzerland)
Tel. +41 61 306 1359
Fax +41 61 306 1434
E-Mail fdt@karger.com

The manuscripts should be accompanied by a signed copyright transfer statement (please see submission website).

Presentation of manuscripts should conform with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals [N Engl J Med 1997;336:309–315].

Conditions
All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Fetal Diagnosis and Therapy and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author's responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

Categories of Manuscripts
The journal is structured into five categories.

Original Papers
Authors are invited to submit their research to the journal. Papers will be classified into four areas of interest:
• Basic Science and Pathophysiology
• Prenatal Diagnosis
• Clinical Fetal Medicine
• Fetal Therapy

Reviews and Mini-Reviews
Reviews on specific questions or topics which are felt to be of interest to the majority of readers; normally, but not exclusively, on clinical issues. They should be concise reviews or mini-reviews which give evidence and provide an answer to a well-defined aspect or question in a particular area. These reviews are normally invited but suggestions for reviews will also be considered, particularly systematic reviews accompanying a case report or case series if they are deemed to be timely and of high quality. Accepted reviews are not subject to page charges.

Novel Insights from Clinical Practice (Case Reports)
While the main aim of the journal is to publish original research and reviews, case reports which provide relevant insights into the background knowledge or which illustrate an extremely unusual clinical course are welcome. In general, case reports with a review of the literature are discouraged and this option should be reserved for exceptional cases, when the review is deemed to be of very high quality and value to the reader.

Images in Fetal Medicine
The section aims to publish images of high interest, either because they illustrate or aid understanding of an important concept or because the image is of particular quality. Images of all kinds are foreseen, including ultrasound, MRI and fetoscopy. Combinations of prenatal imaging with fetoscopic, postnatal, surgical or pathological imaging are particularly encouraged. Authors may be invited to transfer some clinical cases to this section if the images are particularly good. Papers published in this section will be considered as case reports for Medline purposes.

Letters to the Editor
Letters are encouraged if they directly concern articles previously published in this journal or clinical subjects related to the matters discussed. The editor reserves the right to submit copies of such letters to the authors of the articles concerned prior to publication in order to permit them to respond in the same issue of the journal. Letters on general scientific or medical subjects in fetal medicine are also welcome.

Plagiarism Policy
Whether intentional or not, plagiarism is a serious violation. We define plagiarism as a case in which a paper reproduces another work with at least 25% similarity and without citation. If evidence of plagiarism is found before/after acceptance or after publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retracted and the author sanctioned from publishing papers for a period to be determined by the responsible Editor(s).

Arrangement
Title page: The first page of each paper should indicate the title, the authors' names, and the institute where the work was conducted. A short title for use as a running head, as well as the full address of the author to whom correspondence should be sent, are also required.

Full address: The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as e-mail address.

Key words: Please supply 3–10 key words in English that reflect the content of the paper.

Abstract: Please refer to the 'Instructions for Preparation of Specific Manuscript Categories'.

Footnotes: Avoid footnotes. When essential, they are numbered consecutively and typed at the foot of the appropriate page.

Tables and Illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate sheets. Tables require a heading and figures a legend, also prepared on a separate sheet. For technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations in one block for reproduction (max. size 180 × 223 mm) or provide crop marks. Each illustration must be labelled with its number and the first author's name. B/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings one of 800–1,200 dpi. Figure files must not be embedded in a document file but submitted separately (see http://www.karger.com/idt).

Instructions for Preparation of Specific Manuscript Categories

Original Papers
The guidelines below should be followed as closely as possible. This will help the editors and reviewers to interpret the aims and value of your research. An abstract of up to 200 words, structured with the same headings as below, should be provided.

Introduction
This should clearly state the research question and introduce the condition and the clinical or research problem being addressed. Lengthy descriptions of previous evidence, particularly information that may be important for the topic in general but is not strictly related to the research question, should be avoided. At the end of the introduction please clarify what new or complementary information your research is providing with respect to existing knowledge or previous research.

Material and Methods
The section must contain clear information on permissions obtained by ethical committees, inclusion and exclusion criteria, methods of research, variables evaluated and main outcome measures, along with other secondary variables evaluated, definitions used, and statistical analyses.

Results
The findings of the study should be described concisely following the same structure as in Materials and Methods. The text should complement, but not duplicate, the information contained in the tables and figures. Comments on the findings in this section should be avoided.

Discussion
The Discussion should be as structured as possible, and contain at least the following paragraphs, each with information responding to the following questions:
• What are the main findings?
• How do they compare with previous studies: which are the similarities and differences and the reasons for them?
• What are the pathophysiological basis and insights reinforced or newly provided by the findings? (If applicable.)
• What is the clinical relevance of the findings?
• What are the main limitations of the study?

If applicable, a concluding paragraph on potential future lines of research which must be considered according to previous data and/or this particular study.

**Reviews**

Mini-reviews may have the structure of a conventional or systematic review. They must be clearly addressed to respond to a specific question of clinical practice or special pathophysiological importance which will normally be pre-defined by invitation of the Editorial Board. 3,000–4,000 words long, they may contain tables and figures and an unlimited number of references.

**Systematic Reviews**

Both abstract and paper should be structured according to the following scheme: Background/Objectives, Data Sources, Results and Discussion. It is particularly important to precisely describe the methodology used for the systematic review, including data sources, number of reviewers and the pre-established criteria used for the search and classification of papers. If the review is accompanied by a case report or a small case series, the Results section must be divided into two subsections: ‘Case Report/Series’ and ‘Systematic Review of...’

The number of references is unlimited.

**Novel Insights from Clinical Practice**

**Case Reports**

Case Reports must be written concisely and structured as follows:

• A non-structured Abstract (max. 200 words), for Medline purposes.
• No introduction section is required.
• A description of the Clinical Case.
• A Comment which responds to the following questions:
  – What is the background of this subject?
  – Which is the new information that this case provides with respect to what is known?
  – Which are the main insights or conclusions to be drawn?
• Highlighted boxes containing one or two bullet points on ‘Established facts’ (what is already known) and ‘Novel insights’ (what new information has been gained) are required and should be placed on the first page of the report (after title page). These should be selected so as to reinforce the novelty of the clinical observation.
• To illustrate the case the numbers of figures should be kept to a minimum, i.e. not more than three. More images are accepted in justified cases.

**Images in Fetal Medicine**

Images must be accompanied by a brief text, structured in the same way as a Case Report, but considerably shorter in length, and limited to the essential. Ideally, there should be three references (five is the maximum number allowed). Where appropriate a Summary Points box can be provided to summarize the novel insights.

**Letters to the Editor**

Letters should be no longer than one printed page and must concern articles previously published in this journal or clinical subjects related to the matters discussed.

**Color Illustrations**

**Online edition:** Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

**Print edition:** Up to 6 color illustrations per page can be integrated within the text at CHF 800.00 per page.

**References**

Identify references in the text by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surnames of the authors followed by their initials should be given. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org).

**Examples:**

(b) Papers published only with DOI numbers: Theoharides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000124688.

**Reference Management Software:** Use of EndNote is recommended for easy management and formatting of citations and reference lists.

**Digital Object Identifier (DOI)**

S. Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs can be useful in the future for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org.

**Supplementary Material**

Supplementary material is restricted to additional data that are not necessary for the scientific integrity and conclusions of the paper. Please note that all supplementary files will undergo editorial review and should be submitted together with the original manuscript. The Editors reserve the right to limit the scope and length of the supplementary material. Supplementary material must meet production quality standards for Web publication without the need for any modification or editing. In general, supplementary files should not exceed 10 MB in size. All figures and tables should have titles and legends and all files should be supplied separately and named clearly. Acceptable files and formats are: Word or PDF files, Excel spreadsheets only if the data cannot be converted properly to a PDF file, and video files (.mov, .avi, .mpeg).

**Author’s Choice**

Karger’s Author’s Choice service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.karger.com. The option is available for a one-time fee of CHF 3,000.00, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

**NIH-Funded Research**

The U.S. National Institutes of Health (NIH) mandates under the NIH Public Access Policy that final, peer-reviewed manuscripts appear in its digital database within 12 months of the official publication date. As a service to authors, Karger submits the final version of your article on your behalf to PubMed Central. For those selecting our premium Author’s Choice service, we will send your article immediately upon publishing, accelerating the accessibility of your work without the usual embargo. More details on NIH’s Public Access Policy is available at http://publicaccess.nih.gov/policy.htm

**Self-Archiving**

Karger permits authors to archive their pre-prints (i.e. pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution’s servers, provided the following conditions are met: Articles may not be used for commercial purposes, must be linked to the publisher’s version, and must acknowledge the publisher’s copyright. Authors selecting Karger’s Author’s Choice feature, however, are also permitted to archive the final, published version of their article, which includes copyediting and design improvements as well as citation links.

**Page Charges**

There are no page charges for papers of 4 or less printed pages (including tables, illustrations and references). Additional complete or partial page is charged to the author at CHF 325.00. The allotted size of a paper is equal to approx. 12 manuscript pages (including tables, illustrations and references).

**Proofs**

Unless indicated otherwise, a PDF for correction is sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

**E-publish First**

All articles are published electronically ahead of print with a DOI number and are supplemented later with the definite reference of the printed version. The articles become available immediately after the authors’ approval to publication, with the added advantage of being citable much earlier than in print. Authors can influence the time of appearance by promptly returning the proofs.

**Reprints**

Order forms and a price list are sent with the PDF. Orders submitted after the issue is printed are subject to considerably higher prices.

14th World Congress in Fetal Medicine

Crete, Greece, 21–25 June 2015

The Congress will include:

- IFMSS meeting on Fetal Therapy.
- Session on Maternal Medicine.
- Presentations and discussions on advances in screening, diagnosis and management of fetal abnormalities, preterm delivery, preeclampsia and fetal growth restriction.
- Courses on the ultrasound diagnosis of fetal abnormalities.

The topics will be covered by leading international experts and young researchers.

The registration fee which includes meals and social events is €400.

For information please visit:

Fetal growth restriction is possibly the commonest of the great obstetric syndromes. Small fetuses and newborns have a higher risk of intrauterine fetal death and poorer perinatal outcome, and suffer fetal programming and remodeling in different organ systems, which may decrease life expectancy and quality of life. This special issue deals with all of the current relevant topics and challenges concerning the management of fetal growth restriction, and contains several updated reviews about prevention, management and postnatal consequences, as well as original papers that provide new insights into the pathophysiology and clinical management of this syndrome.

Contents

• Fetal Growth Restriction as a Perinatal and Long-Term Health Problem: Clinical Challenges and Opportunities for Future (4P) Fetal Medicine: Gratacós, E.; Figueras, F.
• Update on the Diagnosis and Classification of Fetal Growth Restriction and Proposal of a Stage-Based Management Protocol: Figueras, F.; Gratacós, E.
• Evaluation of an Optimal Gestational Age Cut-Off for the Definition of Early- and Late-Onset Fetal Growth Restriction: Savchev, S.; Figueras, F.; Sanz-Cortes, M.; Cruz-Lemini, M.; Triunfo, S.; Botet, F.; Gratacos, E.
• Placental Pathology in Early-Onset and Late-Onset Fetal Growth Restriction: Mifsud, W.; Sebire, N.J.
• Survey on the Current Trends in Managing Intrauterine Growth Restriction: Savchev, S.; Figueras, F.; Gratacos, E.
• Neurodevelopment after Fetal Growth Restriction: Baschat, A.A.
• Long-Term Follow-Up of Intrauterine Growth Restriction: Cardiovascular Disorders: Demicheva, E.; Crispi, F.
• Fetal Growth Restriction at the Limits of Viability: Visser, G.H.A.; Bilardo, C.M.; Lees, C.
• The Disappearing Brain-Sparing Effect in Early-Onset Fetal Growth Restriction Fetuses Revisited: Yeniel, A.O.; Ergenoglu, A.M.; Sanahil, C.Y.; Akdemir, A.; Akercan, F.; Kazandi, M.; Sagol, S.

Author and Subject Index
This highly respected and frequently cited journal is a prime source of information in the area of fetal and neonatal research. Original papers present research on all aspects of neonatology, fetal medicine and developmental biology. These papers encompass both basic science and clinical research including randomised trials, observational studies and epidemiology. Basic science research covers molecular biology, molecular genetics, physiology, biochemistry and pharmacology in fetal and neonatal life. Papers reporting results of animal studies should be based upon hypotheses that relate to developmental processes or disorders in the human fetus or neonate.

Neonatology
Fetal and Neonatal Research

Editors-in-Chief
H.L. Halliday, Belfast
C.P. Speer, Würzburg

Selected contributions
- Differences in the Maturation of Amplitude-Integrated EEG Signals in Male and Female Preterm Infants: Griesmaier, E.; Santuari, E.; Edlinger, M.; Neubauer, V.; Waltner-Romen, M.; Kiechle-Kohlenbinder, U. (Innsbruck)
- Effects of Natural versus Synthetic Surfactant with SP-B and SP-C Analogs in a Porcine Model of Meconium Aspiration Syndrome: Salvesen, B. (Oslo); Curstedt, T. (Stockholm); Mollnes, T.E.; Saugstad, O.D. (Oslo)
- Early versus Delayed Selective Surfactant Treatment for Neonatal Respiratory Distress Syndrome: Soll, R.F. (Burlington, Vt.)
