Submission
Manuscripts written in English should be submitted using the online submission website at:
www.karger.com/goi
or as e-mail attachment (the preferred word-processing package is MS-Word) to the Editorial Office:
goi@karger.ch
Prof. T.M. D’Hooghe
S. Karger AG
Editorial Office ‘Gynecologic and Obstetric Investigation’
P.O. Box
CH-4009 Basel (Switzerland)
Tel. +41 61 306 1344
Fax +41 61 306 1434
E-Mail s.aeschbach@karger.com
The manuscripts should be accompanied by a signed copyright transfer statement (please see submission website). Names, postal and e-mail addresses of four experts in the appropriate area of research should accompany each manuscript. Referees suggested should not be from the same institute as the authors and, preferably, not from the same country.
Presentation of manuscripts should conform with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (see N Engl J Med 1997;336:309–315).

Conditions
All manuscripts are subject to editorial review. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Gynecologic and Obstetric Investigation and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

Cover letter: All manuscripts must be accompanied by a covering letter signed by all authors. Assurance should be given that the manuscript is not under simultaneous consideration by any other publication.

All manuscripts originating from non-English-speaking countries must be revised by a professional linguistic reviewer and it must be evident from the covering letter that this has been done.
Names, postal and e-mail addresses of four experts in the appropriate area of research should accompany each manuscript. Referees suggested should not be from the same institution as the author.

Good clinical practice: It has become mandatory that every trial in humans must first obtain approval from an independent Ethics Committee and formal, informed consent from the patients before they participate in a clinical study or experiment. In order to avoid unnecessary delay with the review of manuscripts, authors are asked to state, preferably in the Materials and Methods section, that approval and informed consent have been obtained. These two statements must also appear on the covering letter which accompanies every manuscript and is signed by each author.

Plagiarism Policy
Whether intentional or not, plagiarism is a serious violation. We define plagiarism as a case in which a paper reproduces another work with at least 25% similarity and without citation. If evidence of plagiarism is found before/after acceptance or after publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retracted and the author sanctioned from publishing papers for a period to be determined by the responsible Editor(s).

Arrangement
All manuscript pages and all the page lines should be numbered. The pages should be consecutively numbered beginning with the title page, then the text, acknowledgements, references and legends to figures. The text in original papers should be divided under headings: Abstract, Introduction, Material(s) and Method(s), Results, and Discussion.

Title page: The first page of each paper should indicate the title, the authors’ names, the institute where the work was conducted, and a short title for use as running head.

Full address: The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as e-mail address.

Key words: For indexing purposes, a list of 3–10 key words in English is essential.

Abstract: Each paper needs an abstract of up to 200 words. It should be structured as follows: Background/Aims: What is the major problem that prompted the study? Methods: How was the study performed? Results: Most important findings? Conclusion: Most important conclusion?

Footnotes: Avoid footnotes. When essential, they are numbered consecutively and typed at the foot of the appropriate page.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared for separate pages. Tables require a heading and figures a legend, also prepared on a separate page. For technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations on one block for reproduction (max. size 180 x 223 mm) or provide crop marks. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings of 800–1,200 dpi. Figure files must not be embedded in a document file but submitted separately (for detailed instructions, see http://www.karger.com/goi).

Color illustrations
Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 800.00 per page.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surnames of the authors followed by initials should be given. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icjme.org).

Examples
(b) Papers published only with DOI numbers: Theoharides TC, Boucher W, Speark K: Interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063583.

Reference Management Software: Use of EndNote is recommended for easy management and formatting of citations and reference lists.

Categories of Manuscripts
Original Articles
They should not exceed 4 printed pages (3,000 words or approx. 9 manuscript pages double-spaced), including tables, illustrations and references.

Reviews
Reviews are welcomed; however, the Editor-in-Chief is happy to discuss potential articles with authors who would like to contribute.

Systematic Reviews
For systematic reviews of studies examining interventions or diagnostic procedures, we refer to the Cochrane Collaboration (www.Cochrane.org). As they represent ‘the state of the art’, they provide an exceptionally useful handbook. Systematic reviews need not only be the results of intervention studies but can be made on all kinds of research questions, even those that can only be answered by non-experimental studies or interpretive research. For example, a systematic review can be made on qualitative studies – for the ‘Qualitative method group’ of reviews, the Cochrane Collaboration is a useful information source. All systematic reviews must take and document the following steps:

1. Specification of a research question. A systematic review addresses a specific question rather than provides a general summary of the literature on a topic of interest as is in a traditional review, e.g. for...
2. Development of a review protocol. Systematic reviews use a specified method that is planned beforehand and documented in a review protocol to avoid the risk of bias. A review protocol describes the complete review process, including research questions, literature search strategy, selection criteria, criteria for evaluation of methodological quality and how data will be summarized.

3. Systematic literature search. For a systematic review, the search strategy for the literature should be reported and should be repeatable. It includes several steps: a literature search to identify optimal key search terms, databases and search strategy; the search itself; the search of the reference lists of all included studies for the identification of additional studies (snowball method).

4. Selection of relevant studies. This must be done on the basis of selection criteria (e.g., populations, outcome measures, … to include/exclude) described in the protocol. It protects the review from investigator bias, e.g., (un)consciously including studies on the basis of their results.

5. Evaluation of the methodological quality of each study. The quality of a systematic review depends on the quality of all the studies included. Therefore, all studies must be assessed for methodological rigor because the results are only valid if the methods are. Critical appraisal of all studies must be reported and, depending on the research design, conclusions must be drawn.

6. Data collection from individual studies. The data that must be collected depends on the research question and must overcome the different methods of reporting and presenting data in the individual studies. It is useful to use a tool such as a literature table.

7. Synthesis of the findings. The aim of this phase is to summarize the findings from individual studies in an objective manner. The technique depends on the type of studies included. Under certain circumstances (same question, same population, same administration of the intervention, same outcome), the results of experimental studies can be pooled by meta-analysis. The results of nonexperimental studies relating to a phenomenon of interest can be summarized in a meta-synthesis which is an interpretative rather than a cumulative exercise used in meta-analysis.

Narrative Reviews
If the authors are of the opinion that a systematic review is not possible for a specific topic/clinical question, they may opt for a narrative review. For narrative reviews, authors are also requested to have an appropriately formulated research question, to specify their literature search, to carefully consider and discuss the methodological quality of all studies included, and to give an objective summary of the results and conclusion. Narrative reviews need to contain at least the following items:

- Key words used in the electronic search
- Identification of electronic database(s) searched by authors
- Exact definition of time period of publications searched by authors (start and end dates)
- Number of relevant titles identified by authors
- Number of published abstracts read by authors
- Number of full papers read by authors
- Number of cases published in international peer-reviewed literature (if review on case reports)
- Reason for inclusion or exclusion by authors of specific publications

• Summary table of included publications allowing comparison regarding significant findings
• Summary statement taking into account all available evidence

References

Novel Insights from Clinical Practice
This category replaces the previous Case Report section.
We invite contributions to this section that provide novel insight into a clinical problem.
We recognize the value of case reports and thus submissions can be based around a case or a number of similar cases. The most important aspect of the presentation is that it should provide a new perspective on a recognized clinical scenario or may represent an entirely new clinical condition. The novel aspects of the case(s) may be in the phenotype, the presentation, the investigation and/or the management.
We propose that a highlighted box containing one or two bullet points on ‘Established Facts’ (what is already known) and ‘Novel Insights’ (what new information has been gained) be placed on the first page of the report. This will reinforce the novelty of the clinical observation. The manuscript should be presented with an unstructured abstract (max. 200 words), brief introduction, case or case series description and results, followed by a discussion. Maximum 3 figures.

Summaries of PhD Theses
A Summary of a PhD Thesis is supposed to give a review of the different papers that are part of a particular PhD thesis which has been successfully defended within the last 3 years. The review should have at least 6,000 words and a maximum of 10,000 words of text with a maximum of 200 references, 5 tables and 5 figures. Considerable emphasis should be given to an overall systematic discussion of the PhD findings, and their implication for clinical practice and/or research.

Letters to the Editor
This section is set aside for critical comments directed to a specific article that has been published in the journal. Letters should be brief (not exceeding 500 words), double spaced and limited to a maximum of 5 citations. The letters and replies should be prepared according to journal format. Illustrative material is only permitted with permission of the Editor-in-Chief. With your correspondence, please include your complete mailing address, telephone and fax numbers, and email addresses, if available. The Editor-in-Chief reserves the right to refuse letters, short- en letters, delete objectional comments, and make other changes to comply with the style of the journal. Send all Letters to the Editor to the above address.

Digital Object Identifier (DOI)
S. Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs can be useful in the future for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org.

Exploring new worlds in research

HPV 2015

30TH INTERNATIONAL PAPILLOMAVIRUS CONFERENCE & CLINICAL AND PUBLIC HEALTH WORKSHOPS

September 17-21, 2015
Lisbon, Portugal

www.hpv2015.org
22nd World Congress on Controversies in Obstetrics, Gynecology and Infertility (COGI)

Budapest, Hungary
September 17-20, 2015

COGI is your avenue
to showcase your abstract and exchange ideas.
Abstract Submission Deadline: June 14, 2015

More opportunities to learn:
• Scientific discussions on current clinical controversies covering advances in more than 15 sub-disciplines
• Presentations by more than 100 interdisciplinary opinion leaders
• Robert G. Edwards, Nobel Prize Laureate exclusive lecture

More opportunities to connect:
• Reunite with your colleagues and explore new partnerships

More opportunities to share:
• Hundreds of gynecologists and scientists from all over the world will introduce their work in oral and poster presentations
• Special young scientists competition for best abstract presenters

Monographs in Virology

Compact and thorough reference volumes for virologists and non-virologists alike

A skilful selection of topics of exceptional importance and a panel of acknowledged experts as authors have ensured an outstanding reputation for this series. Each monograph, centered on an active area of virologic research, provides a critical evaluation of recent progress and a useful commentary on the direction of future research. Characterized by a consistently high standard of scholarship and clear presentation of content, volumes in this series have proved their enduring value as convenient reference tools for both virologists working in the field and scientists working in allied areas.

Vol. 28: Prophylaxis and Early Detection of HPV-Related Neoplasia
Editor: Pfister, H. (Cologne)
VIII + 140 p., 27 fig., 21 in color, 12 tab., 2012
CHF 119.00 / EUR 99.00 / USD 140.00 (hard cover)
CHF 143.00 / EUR 119.00 / USD 168.00 (online)
ISBN 978-3-8055-9964-1

31st ANNUAL MEETING
European Society of Human Reproduction and Embryology

Lisbon – Portugal
14 to 17 June 2015

www.eshre2015.eu
Concise but fully substantiated international reports of clinically oriented research into the science and current management of urogenital disorders form the nucleus of original as well as basic research papers. These are supplemented by up-to-date reviews by international experts on the state-of-the-art of key topics of clinical urological practice. Essential topics receiving regular coverage include the introduction of new techniques and instrumentation as well as the evaluation of new functional tests and diagnostic methods. Special attention is given to advances in surgical techniques and clinical oncology. The regular publication of selected case reports represents the great variation in urological disease and illustrates treatment solutions in singular cases.
Dear Librarian,

I would like to recommend the following book for our library.

**Human Papillomavirus**

**Bench to Bedside**

**Editors**

Marigdalia K. Ramírez-Fort
Farhan Khan
Peter L. Rady
Stephen K. Tyring

Human papillomavirus (HPV) infection transcends multiple fields of science and medicine. The management of HPV-related disease is demanding and often requires a persistent multimodal approach involving various medical disciplines.

In this volume, experts present a comprehensive view of HPV research with an emphasis on clinical presentations, diagnosis, management and vaccine development. The state of the art in molecular biology is provided in addition to discussions on clinical morphology and the utility of dermatoscopy in identifying HPV disease. In a multidisciplinary approach to dermatological, plastic and reconstructive, gynecological, otolaryngological and colorectal management, different treatment strategies are highlighted. Finally, Dr. Neil Christensen discusses viral immunology, and the difficulties and successes in the development of an HPV vaccine.

Bringing together basic science and clinical information on HPV, this book is an excellent resource and reference for all researchers and clinicians who encounter human papillomavirus-related disease.

**Contents**

Foreword: Brodell, R.T.

**Introduction**

**Molecular Biology and Pathogenesis**

- The Biology of Human Papillomaviruses: Nguyen, H.P.; Ramírez-Fort, M.K.; Rady, P.L.
- Viral Oncogenesis: Doan, H.Q.; Ramírez-Fort, M.K.; Rady, P.L.
- Pathogenesis of Infection by Human Papillomavirus: Brendle, S.A.; Bywaters, S.M.; Christensen, N.D.
- Host Responses to Infection with Human Papillomavirus: Stanley, M.A.; Sterling, J.C.

**Epidemiology and Clinical Manifestations**

- The Epidemiology of Human Papillomaviruses: Nyitray, A.G.; Iannacone, M.B.
- Cutaneous Human Papillomavirus Infection: Manifestations and Diagnosis: Tschandl, P.; Rosendahl, C.; Kittler, H.
- Genitoanal Human Papillomavirus Infection and Associated Neoplasias: Gross, G.
- Epidermodysplasia Verruciformis: Burger, B.; Itin, R.H.
- Human Papillomavirus Infections of the Oral Mucosa and Upper Respiratory Tract: Nguyen, H.P.; McNiece, K.L.; Duong, A.A.; Khan, F.
- Human Papillomavirus and Immunosuppression: Wieland, U.; Kreuter, A.; Pfister, H.

**Laboratory Diagnosis**

- Laboratory Diagnosis of Human Papillomavirus Infection: Ikenberg, H.

**Treatment and Prevention**

- Management of Cutaneous Human Papillomavirus Infection in Immunocompromised Patients: Varada, S.; Posnick, M.; Alessa, D; Ramírez-Fort, M.K.
- Management of Human Papillomavirus-Related Gynecological Malignancies: Heinzelmann-Schwarz, V.A.; Kind, A.B.; Jacob, F.
- Management of Human Papillomavirus-Related Anal and Colon Cancer: Yen Moore, A.; Tong, L.X.; Moore, T.
- Vaccines and Immunization against Human Papillomavirus: Christensen, N.D.; Budgeon, L.R.
