Karger Publishers –
125 Years of Experience
in Medical and
Scientific Publishing

Karger Publishers – independent, family-run and Swiss-based.

It is our goal to serve the global scientific community with innovative and outstanding publications in all fields of medical science. This means dedication to maintaining the highest standards of quality, as well as personalized service for authors, editors and readers.

Please order a free copy of the Karger Festschrift ‘Connecting the World of Biomedical Science’ by sending your address to 125years@karger.com.
Psychotherapy and Psychosomatics

Psychotherapy and Psychosomatics publishes research articles on clinical issues in medicine and psychiatry, with special reference to psychotherapy and psychosomatic research. The journal is well known for its high-quality articles on current and controversial issues; innovations (both in terms of conceptualization and pilot studies); case management articles (biopsychosocial management in clinical medicine); clinical notes; letters to the editor (both comments on published articles and preliminary research).

Submission

Only papers written in English are considered and should be submitted using the online submission website at: www.karger.com/pps

Should you experience any problems with your submission, please contact:

Giovanni A. Fava, MD
Dipartimento di Psicologia
Università di Bologna
Viale Risorgimento 4

E-Mail: giovanniandrea.fava@unibo.it

Guidelines for Authors

Footnotes: Avoid footnotes. When essential, they are numbered consecutively and typed at the bottom of the appropriate page.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figures a legend, also prepared on a separate sheet. For the reproduction of illustrations, only good drawings and original photographs can be accepted; negatives or photocopies cannot be used. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations on one block for reproduction (max. size 180 × 223 mm) or provide crop marks. On the back of each illustration, indicate its number, the author’s name, and ‘top’ with a soft pencil. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings one of 800–1,200 dpi.

Color illustrations: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legend.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 800.00 per page.

Data analysis: Adequate description of statistical analysis should be provided, including the types of statistical tests and whether they were one- or two-tailed. Standard deviations, instead of standard errors of the mean, are preferred. All significant results must include the test value, degree(s) of freedom, and probability level.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The names of the authors followed by initials should be given. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org).

Examples:

(b) Papers published only with DOI numbers: Theoharides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063858.

Self-Archiving

Karger permits authors to archive their pre-prints (i.e. pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution’s servers, provided the following conditions are met: Articles may not be used for commercial purposes, must be linked to the publisher’s version, and must acknowledge the publisher’s copyright. Authors selecting Karger’s Author’s Choice service, will send your article immediately upon publishing, accelerating the accessibility of your work without the usual embargo. More details on the Self-Archiving Policy is available at http://publicaccess.nih.gov/policy.htm

Supplementary Material

Supplementary material is restricted to additional data that are not necessary for the scientific integrity and conclusions of the paper. Please note that all supplementary files will undergo editorial review and should be submitted together with the original manuscript. The Editors reserve the right to limit the scope and length of the supplementary material. Supplementary material must meet production quality standards for Web publication without the need for any pre-publication editing. In general, supplementary files should not exceed 10 Mb in size. All figures and tables should have titles and legends and all files should be supplied separately and named clearly. Acceptable files and formats are: Word or PDF files, Excel spreadsheets (only if the data cannot be converted properly to a PDF file), and video files (.mov, .avi, .mpeg).

Author’s Choice service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.Karger.com. The option is available for a one-time fee of CHF 3,000.00, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice

NII-Funded Research

The U.S. National Institutes of Health (NIH) mandates under the NIH Public Access Policy that final, peer-reviewed manuscripts appear in its digital database within 12 months of the official publication date. As a service to authors, Karger submits the final version of your article on your behalf to PubMed Central. For those selecting our premium Author’s Choice service, we will send your article immediately upon publishing, accelerating the accessibility of your work without the usual embargo. More details on NIH’s Public Access Policy is available at http://publicaccess.nih.gov/policy.htm

Page Limitations and Charges

There are no page charges for papers of 7 or fewer printed pages (including tables, illustrations and references). Each additional complete or partial page is charged to the author at CHF 325.00. The allotted size of a paper is equal to app. 18 manuscript pages (including tables, illustrations and references). Letters commenting on published articles should not exceed 500 words of text plus references. More than 10 references. They may have only one table or figure.

Proofs

Unless indicated otherwise, proofs are sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

Reprints

Order forms and a price list are sent with the proofs. Orders submitted after the issue is printed are subject to considerably higher prices.

Gives a fundamental overview of the most recent knowledge on phenotypes, mechanisms and treatment of autism spectrum disorders. It covers topics on diagnostic issues, comorbid conditions and therapeutic strategies along with a detailed discussion on the actual understanding of the pathophysiology of autism disorders. More specifically, this book reviews in detail the current knowledge on the comorbidity between mental and medical disorders, describes abnormal cognitive and social development and gives a thorough overview on genetic as well as brain imaging abnormalities observed in autism spectrum disorders. In addition, the current literature on environmental risk factors which may provide an explanation for the increased prevalence of autism is being described. The last chapter gives an extensive review of early detection and early therapeutic interventions encompassing psycho-social and pharmacological strategies.

Accurate and exhaustive, this book provides a wide overview of the current knowledge on phenotypes, mechanisms and treatment of autism spectrum disorders. It covers topics on diagnostic issues, comorbid conditions and therapeutic strategies along with a detailed discussion on the actual understanding of the pathophysiology of autism disorders.
