Subject Index

Acoustic neuroma, otosclerosis association 34, 35
Adipose tissue, oval window sealing 207
Aggrecan, gene linkage analysis 77, 83, 84
Air-bone gap (ABG) closure and hearing outcomes 169, 170, 190, 191
elderly patient outcomes 232, 234
OTSC2 genotype-phenotype correlation study 116
quantitative analysis 124
surgery outcome evaluation 340–342
tinnitus relationship 347
Air conduction threshold
OTSC2 genotype-phenotype correlation study 116
quantitative analysis 124
Anterior malleal ligament, fixation 159, 160
Apoptosis, corticosteroid protection in cochlea 306
Audiometry
importance in stapes surgery 119
multifrequency typanometry 123
otoacoustic emissions 123, 124
outcome measures 125
pure-tone audiometry 120, 121, 123
quantification 124, 125
Sofia profile plot, see Sofia profile plot
surgery outcome evaluation 340–342
tuning fork tests 120
Basilar membrane displacement, finite element modeling of stapes-inner ear interface 150–154
Blood, oval window sealing 207, 209
Bone conduction threshold
change over time after stapedotomy 267–272
stapedotomy comparison between carbon dioxide laser and skeeter surgery 267–272
Bone remodeling, see Perilabyrinthine bone; Sclerosing bone dysplasias
Carbon dioxide laser
advantages in stapes surgery 250
bone conduction thresholds in skeeter versus laser stapedotomy 267–272
features 243
one-shot stapedotomy
complications 261, 262, 264
goals 255, 262
hearing outcomes 259, 260, 263, 264
SurgiTouch scanner integration 256, 259, 262
technique 256, 258, 259
revision stapes surgery
outcomes 253, 254
technique 251, 253
Cerebrospinal fluid (CSF), perilymphatic fistula and granuloma 297, 298
Clip Piston MVP, malleus grip
stapedectomy 198–201
Cochlea
computed tomography of pathology 331–334
corticosteroid protection in stapes surgery 301–306
